

Perigon ToolsSM

FIVE COMPONENTS

Perigon ToolsSM is a library of specialized templates, symbols, stencils, matrices, instructions and best practices developed exclusively by Business Enterprise Mapping. It contains a wide variety of applications along with a wealth of best practices that has been accumulated from working with over 300 enterprises, in 60 industries, across 5 continents going back over twenty years. Perigon ToolsSM consists of five proprietary components:

TEMPLATES

Mapping templates have been created in Microsoft Visio to standardize the process map for use among any industry or department. The user friendly format is easy to create, understand, follow and edit.

ICONS

Business Enterprise Mapping has developed specialized icons to provide consistency as well as visual guidelines for multilingual and international enterprises.

BEST PRACTICES

Working around the globe, Business Enterprise Mapping has gathered best practice process standards that can immediately be implemented for fast and effective cost-savings and process improvement.

MATRICES

Matrices add the detail that give a Perigon Map the ability to standalone. They add depth to a map to provide a comprehensive and detailed view of a process, and are utilized by many, including process owners, subject matter experts and newcomers.

ANALYSIS

Business Enterprise Mapping has an extensive set of analysis tools that can be used to improve a process. In addition, the firm's enterprise scorecard provides the integration of process, system, and enterprise performance.
